

LAWWISE

DIGITAL LEGAL PRACTICE AUTOMATION SYSTEM

INTRODUCTION

LawWise is a digital practice management system for lawyers that organizes and streamlines daily legal workflows such as case tracking, deadlines, appointments, and document management in a structured and efficient way. It also includes client case management and e-filing support, along with academic tools for law students to manage their studies. Overall, it transforms manual legal work into a modern, organized digital system focused on effective management.

PROBLEM STATEMENT

The traditional legal system is slow, expensive, and disorganized. Lawyers waste valuable time managing paperwork and schedules across different manual tools, while clients struggle to find legal representation or track their case progress transparently. Furthermore, looking up Pakistani statutes remains incredibly slow because critical law codes are not digitized or searchable, making it difficult for both lawyers and clients to find the right legal references quickly.

SYSTEM ARCHITECTURE

MAIN OBJECTIVES

LEGAL PRACTICE MANAGEMENT

To provide a centralized digital system for lawyers to efficiently manage cases, documents, deadlines, and daily legal workflows.

PROCESS AUTOMATION

To automate routine legal tasks such as case tracking, scheduling, and document handling to improve productivity and reduce manual effort.

AI SUPPORT FOR LAWYERS

To assist lawyers with AI-based legal drafting and structured case organization for faster and more accurate work.

CLIENT & CASE MANAGEMENT

To manage client records, case details, and e-filing processes within a unified and organized system.

EFFICIENCY & ORGANIZATION

To improve time management, accuracy, and overall organization in legal practice operations.

ACADEMIC SUPPORT MODULE

To provide tools for law students such as study planning, GPA calculation, notes sharing, and past paper access.

DIGITAL TRANSFORMATION

To convert traditional manual legal processes into a modern, digital, and automated management system.

TECHNOLOGY STACK

React 19

Next.js 16

Tailwind CSS

Node.js

Express.js

FastAPI (Python)

MongoDB

ChromaDB (Vector DB)

Google Gemini Pro

Nodemailer

YouTube Search API
